

## 2018 ASABE Monthly Lib codes

There is a Link to ASABE in Additional Links on jamshow WEB page

When in ASABE and prompted for member number – (enter the word next to the month below)

Password – 2018

Note: Passwords are provided only for 2018. Passwords for 2019 January and February are not provided. It is assumed Standards will need to be downloaded and studied in the planning and designing phases of the project and/or Tractor Restoration or Reconditioning. Copies of appropriate standards should be included in the Research component of the Documentation.

2018 codes are:

October – flow

November – element

December - process

One of the primary objectives in requiring these standards in your documentation is to teach you how to search for and print technical documents found in Professional Technical Research Libraries such as the (ASABE) American Society of Agricultural and Biological Engineers.

A secondary objective is for you to use the standards in designing and constructing your project and/or restoring or repairing your tractor. Standards are relevant to the early tractors as well as the later models.
